Projects

Hosting a website using amazon S3: Hosting a static website on Amazon Simple Storage Service (S3) provides a serverless, highly durable, and cost-effective architecture for delivering static web assets (HTML, CSS, JavaScript, and media) directly to end users without maintaining web servers.

Building a VPC with resources: This project establishes a logically isolated, multi-tier network infrastructure on Amazon Web Services (AWS) using custom IP address ranges (CIDR blocks). It provides a secure, fault-tolerant foundation for hosting multi-tier applications across public and private network boundaries while maintaining strict access control.
